SINEAX VK 636
Programmable Temperature Transmitter
with PROFIBUS-PA protocol

for installation in the terminal head of a temperature sensor DIN 43 729, shape B

CE 0102   Ⓔⓧ   II 2 (1) G FISCO   PROFI BUS PROCESS FIELD BUS

Application

The **SINEAX VK 636** is a temperature transducer for use in automation systems with PROFIBUS.

It converts the measured value, i.e. the signal from a thermocouple or a resistance thermometer to the PROFIBUS-PA format.

PROFIBUS-PA (**P**rocess **A**utomation) is an open field bus standard according to EN 50 170 and IEC 61 158-2 that requirements of the process industries.

Both the communication and power supply are via the bus conductors.

The measured variables, ranges and other parameters can be configured and set on a PC (Master Class 2) running the respective configuration software.

Configurations and settings

A Master Class 2, the basic device file (GSD), the device description (DD) and the respective configuration software are needed to configure and set the transmitter. The hardware required includes an DP cable, a bus coupler and an ancillary two-wire cable.

The connections between "Master Class 2 ↔ bus coupler ↔ SINEAX VK 636" can be seen from Fig. 2.

The bus coupler compensates the level between RS 485 and IEC 61 158-2 and also establishes the power supply connection between the Master Class 2 and the SINEAX VK 636 transmitter.
